Ocean Networks Canada

AN INITIATIVE OF

**University
of Victoria**

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

OCEAN
NETWORKS
CANADA

OCEAN NETWORKS CANADA

Discover the ocean. Understand the planet.

❖ ONC Observatories:

- ❖ Home to VENUS (coastal), NEPTUNE (off-shore) and Cambridge Bay (Arctic) cabled observatories
- ❖ Over 300 instruments, hundreds of scalar sensors

Franklin Strait Ice Buoy (0 m)

Queen Maud Gulf Ice Buoy (0 m)

FUNDING STRUCTURE

- ❖ Ocean Networks Canada is a “Major Science Infrastructure” in Canada
- ❖ Operating funds come from the CFI (40%) in 5-year chunks
- ❖ Other sources of funding that include more federal sources and commercial revenue through our Innovation Centre.

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

**OCEAN
NETWORKS
CANADA**

SCIENCE

ONC'S OBSERVATORIES

- ❖ First significant foray of Ocean Sciences into the area of “Big Science”
- ❖ A Facility serving many different ocean science disciplines
- ❖ Unlimited in scope, size and geographical location
- ❖ Endless instrumental capabilities

NEPTUNE

NEPTUNE Canada

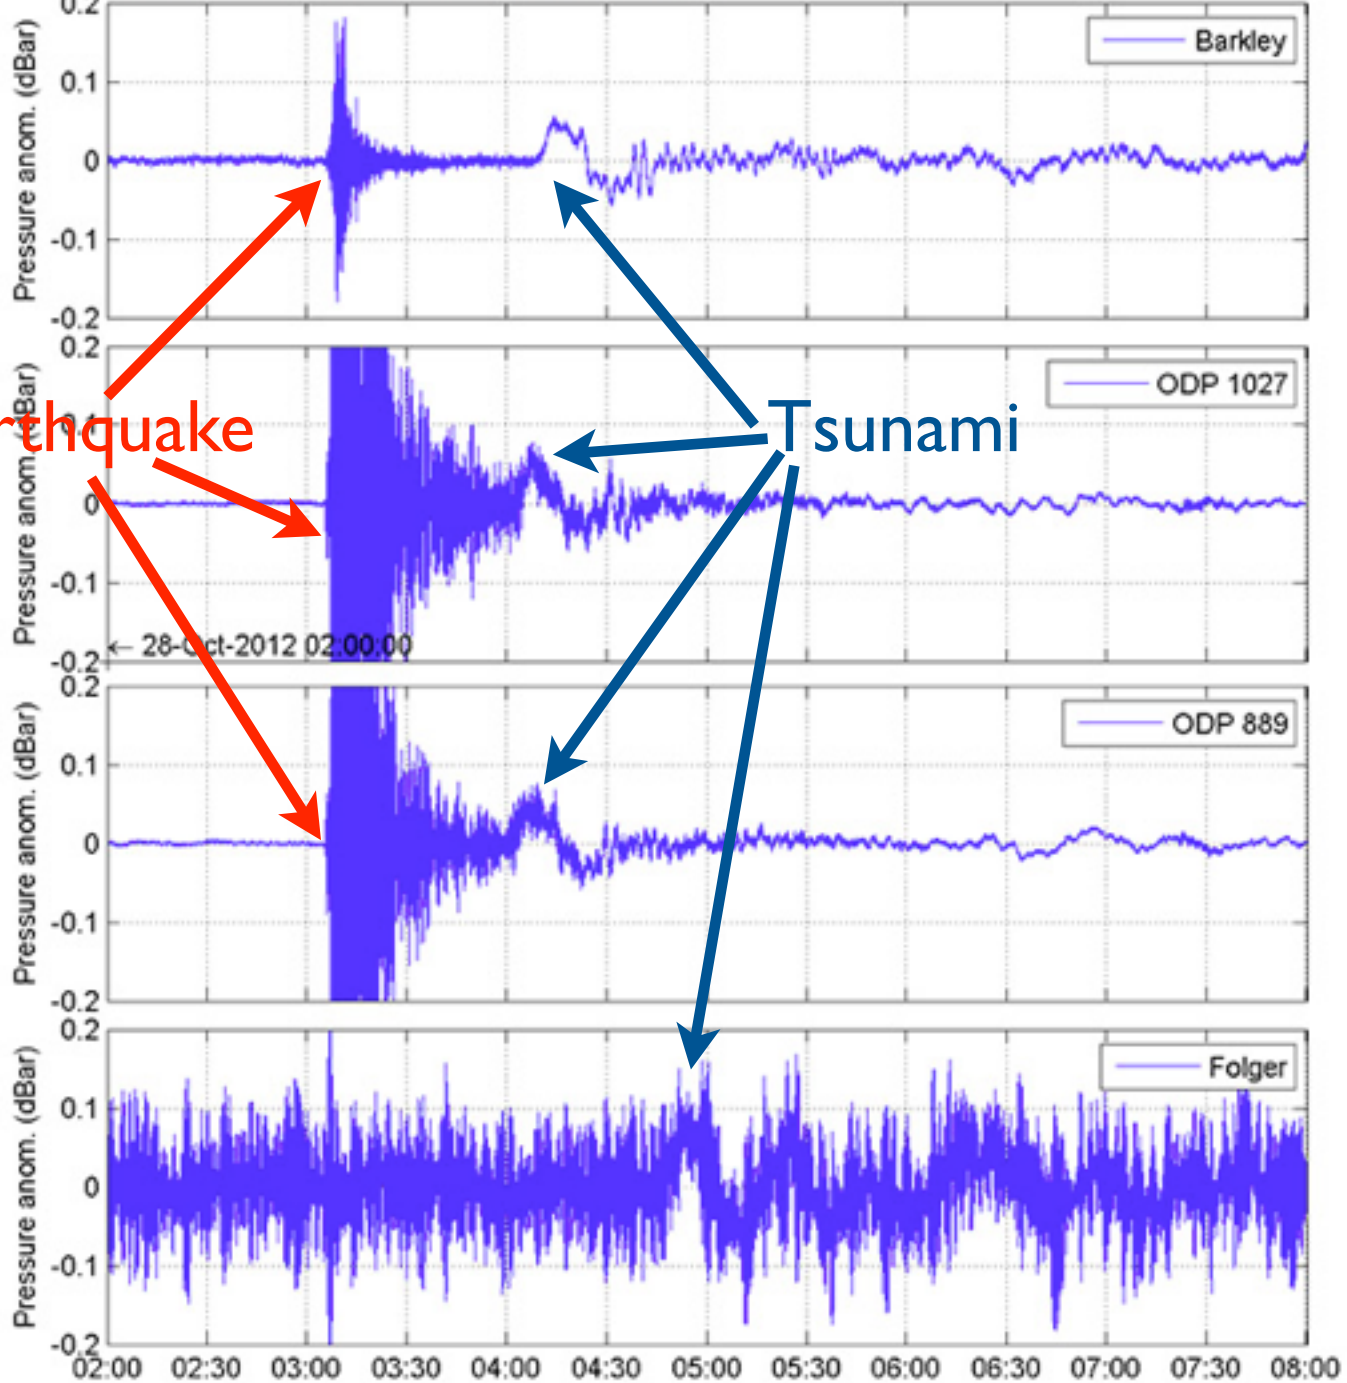

ODP 1027

TYPES OF DATA

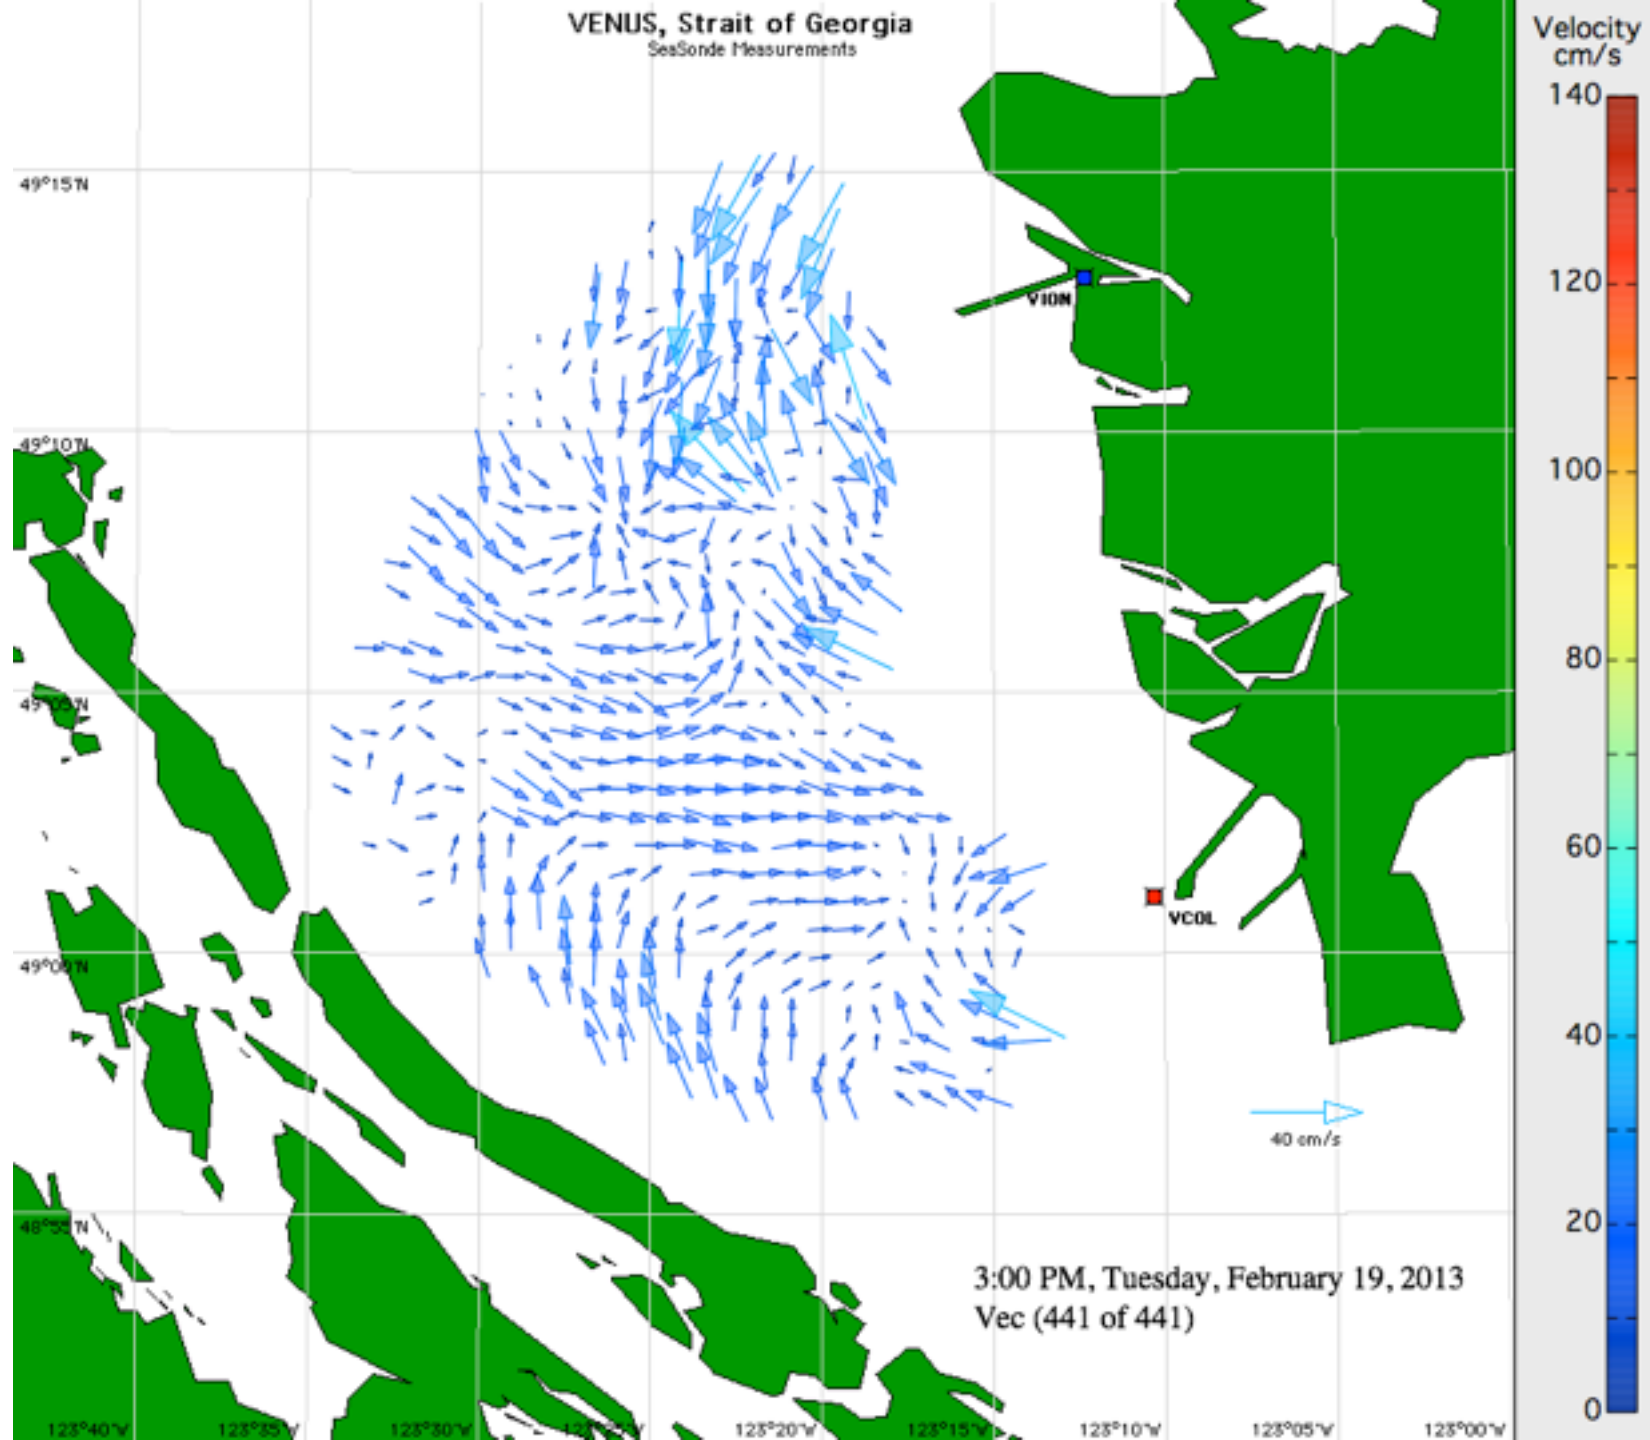

❖ The whole gamut...

- Sensors producing single numbers from time to time
- Sensors producing n-dimensional matrices
- Sensors producing streams of data at high sampling rates (seismometers, hydrophones, cameras, ...)

Bottom Pressure Anomalies (tides removed)

LEARNING & ENGAGEMENT

LEARNING & ENGAGEMENT

❖ Learning & Engagement team

- Formal Learning

- K-12, Undergraduate engagement, Ship2Shore program

- Informal Learning

- Museums & Aquaria, Public displays

- Engagement

- Indigenous community relations, Public events

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

OCEAN
NETWORKS
CANADA
INNOVATION

INNOVATION CENTRE

INNOVATION CENTRE

- ❖ Support of instruments manufacturers (long term instrument tests on ONC observatories)
- ❖ Commercialization of technology and expertise
- ❖ Smart Oceans Systems™ (geohazards early warning, sea state indices, marine mammal — ship interactions mitigation)

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

OCEAN

INNOVATION

DIGITAL INFRASTRUCTURE

DIGITAL INFRASTRUCTURE

- ❖ ONC's Digital Infrastructure has demonstrated:
 - Ability to acquire data in quasi real time from hundreds of sensors, online or not
 - Have the ability to quality-control, archive and be the steward for the data
 - Make data available to many users, both professional and the public
 - Derive data products autonomously

ONC DI REQUIREMENTS

- ❖ Extend the Internet under the Ocean
- ❖ Capture data from *many* different types of sensors (1D->5D data)
- ❖ Interact with underwater instrumentation (e.g., cameras)
- ❖ Provide precision time
- ❖ Keep data + metadata for 25 years
- ❖ Provide search, visualization, data products to many users
- ❖ Allow for X-correlation between data from various sensors
- ❖ Detect and react to events

DI PRINCIPLES

- ❖ Built a system based on integrated data stewardship
 - “Drivers” to talk to instruments from various origins/manufacturers
 - Metadata collected before, during and after instrument deployment
 - Data stored on disks in multiple locations
 - Data access providing different data products for different user needs

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

ONC DI STRUCTURE

SOFTWARE DEV & QC (20)

- Polyvalent IT staff

SYSTEMS & OPS (5)

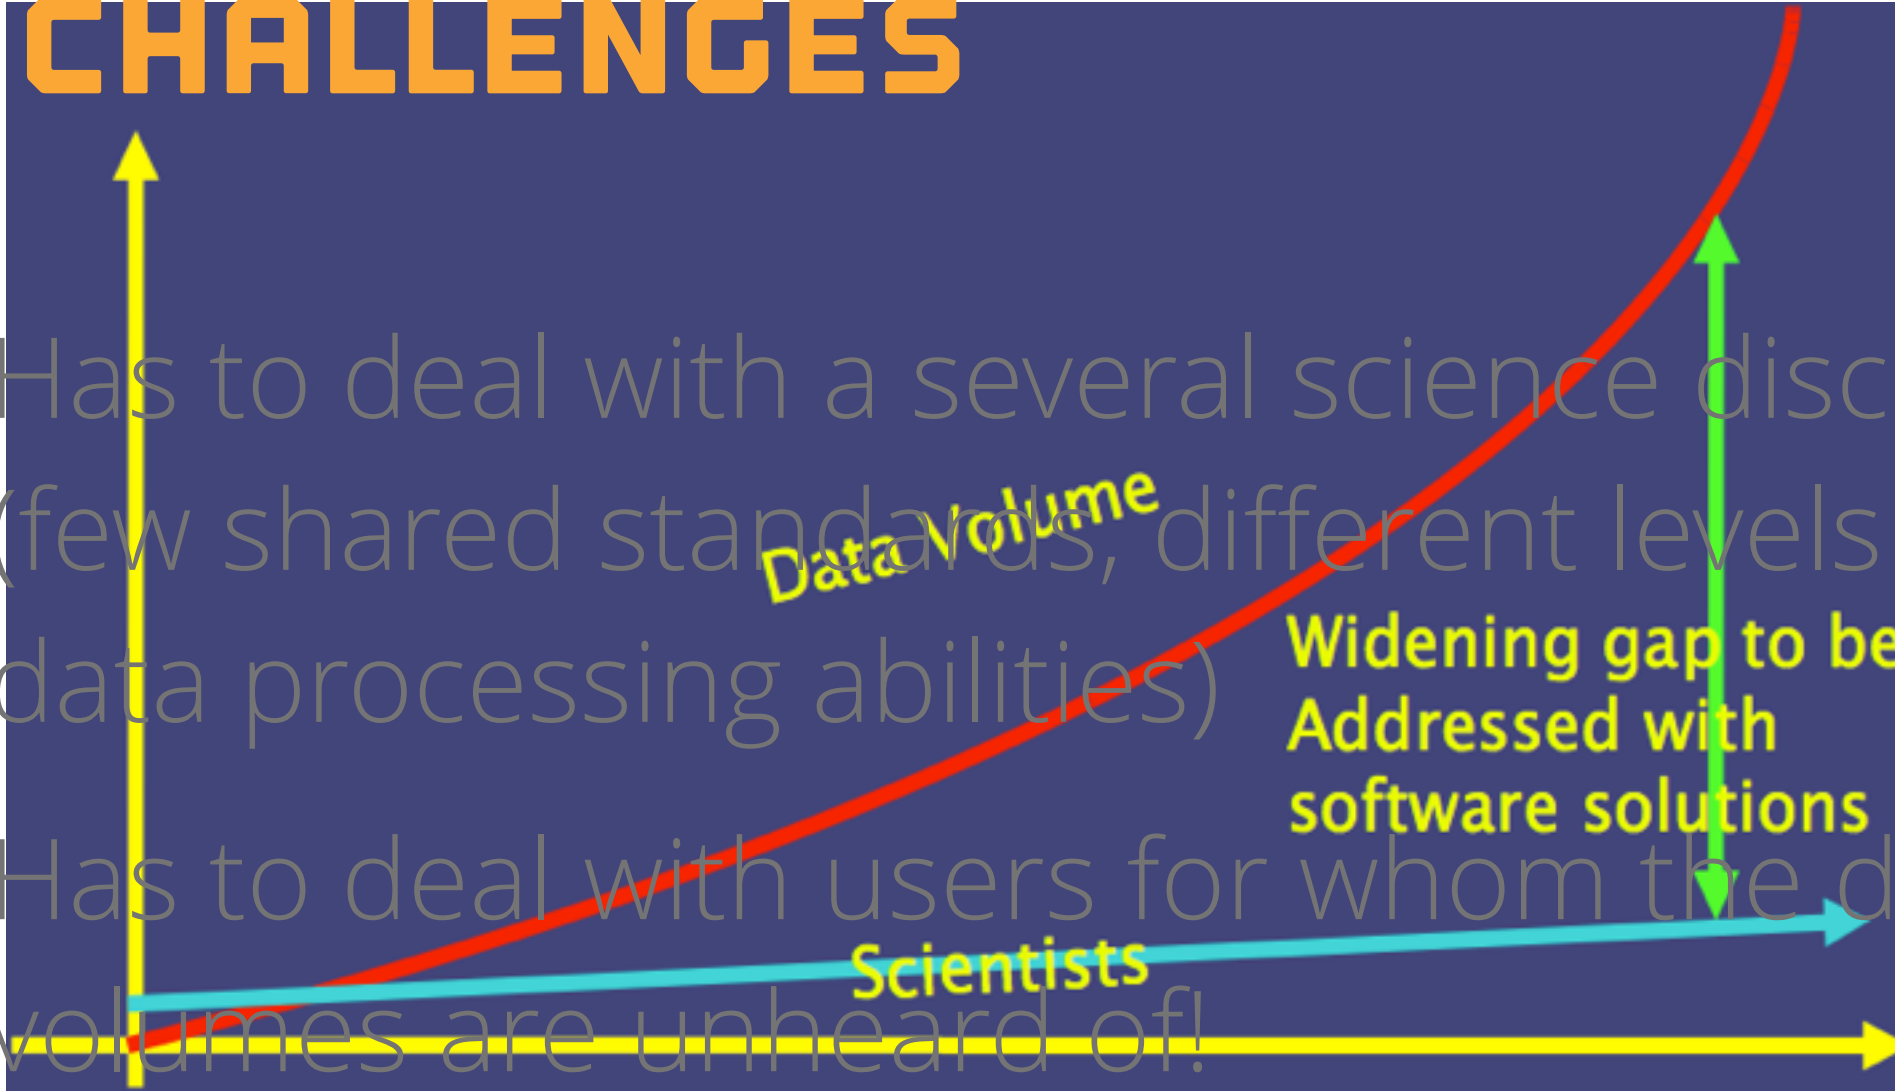

- On call
- Network, systems management
- Redundancy management
- Support software management

DATA STEWARDSHIP (4)

- Data QA/QC
- Data annotation
- Overall metadata quality
- User support
- GIS

DI CHALLENGES

- ❖ Has to deal with a several science disciplines (few shared standards, different levels of data processing abilities)
- ❖ Has to deal with users for whom the data volumes are unheard of!

INTERNATIONAL LINKAGES

OCEAN
NETWORKS
CANADA

- ❖ Include the US Ocean Observatory Initiative
- ❖ Other groups worldwide interested in getting ONC to help them setup their own system
- ❖ Use of interoperability approaches to provide data to both user communities
 - OGC for simple sensors
 - OpenDAP for multi-dimensional data

COOPERATIONS WITH EU INSTITUTIONS

- ❖ Visiting scientist/engineer exchanges (2009-10, 2013 & 2014)
- ❖ Cooperation agreements (**Ifremer, EMSO** — 2013, **SmartBay Galway** — 2008, **UK National Oceanography Centre** — 2011, **PLOCAN**, Spain — 2012, ...)
- ❖ Organization of joint workshops

DISCOVER THE OCEAN. UNDERSTAND THE PLANET.

PARTNERSHIPS WITH EU INSTITUTIONS: INSTRUMENTATION

Instrument assembly
on the NEPTUNE observatory:
Ifremer, Brest

Vehicle operational since 2010
on the NEPTUNE observatory:
Jacobs University, Bremen

PARTNERSHIPS WITH EU INDUSTRY

- ❖ Alcatel-Lucent (France/UK)
 - NEPTUNE Backbone cable and node technology
- ❖ NORTEK A/S (Norway) – active acoustics
- ❖ MacArtney A/S (Denmark) – Buoy Profiler System
- ❖ Unisense (Denmark) – chemical sensors

Alcatel deep-sea node

Buoy Profiler System

DATA INTEROPERABILITY

- ❖ Interoperability efforts with Pangaea (Alfred Wegener Institute and MARUM — 2009)
- ❖ ONC's Oceans 2.0 is using Open Geospatial Consortium (OGC)'s Sensor Web Enablement approach (using 52° North Initiative for Geospatial Open Source Software GmbH)

SCIENCE INTERACTIONS

- ❖ ONC has active scientists in many EU countries (EU countries heavily represented in our top users)
- ❖ Scientific collaboration programmes ongoing (e.g., automatic video analysis)

PLANS GOING FORWARD

- ❖ More collaborations with EU institutions
 - Building on opportunities of Horizon 2020 and the Galway Agreement
- ❖ Increased focus on the Arctic
- ❖ Expanding Smart Oceans Systems™ to contribute to Canadian priorities
- ❖ Using ONC's Oceans 2.0 data management system as an integrator
 - Bringing together data from more diverse sources
 - Delivering value-added products to a broader group of users (international science, industry and gov't)
